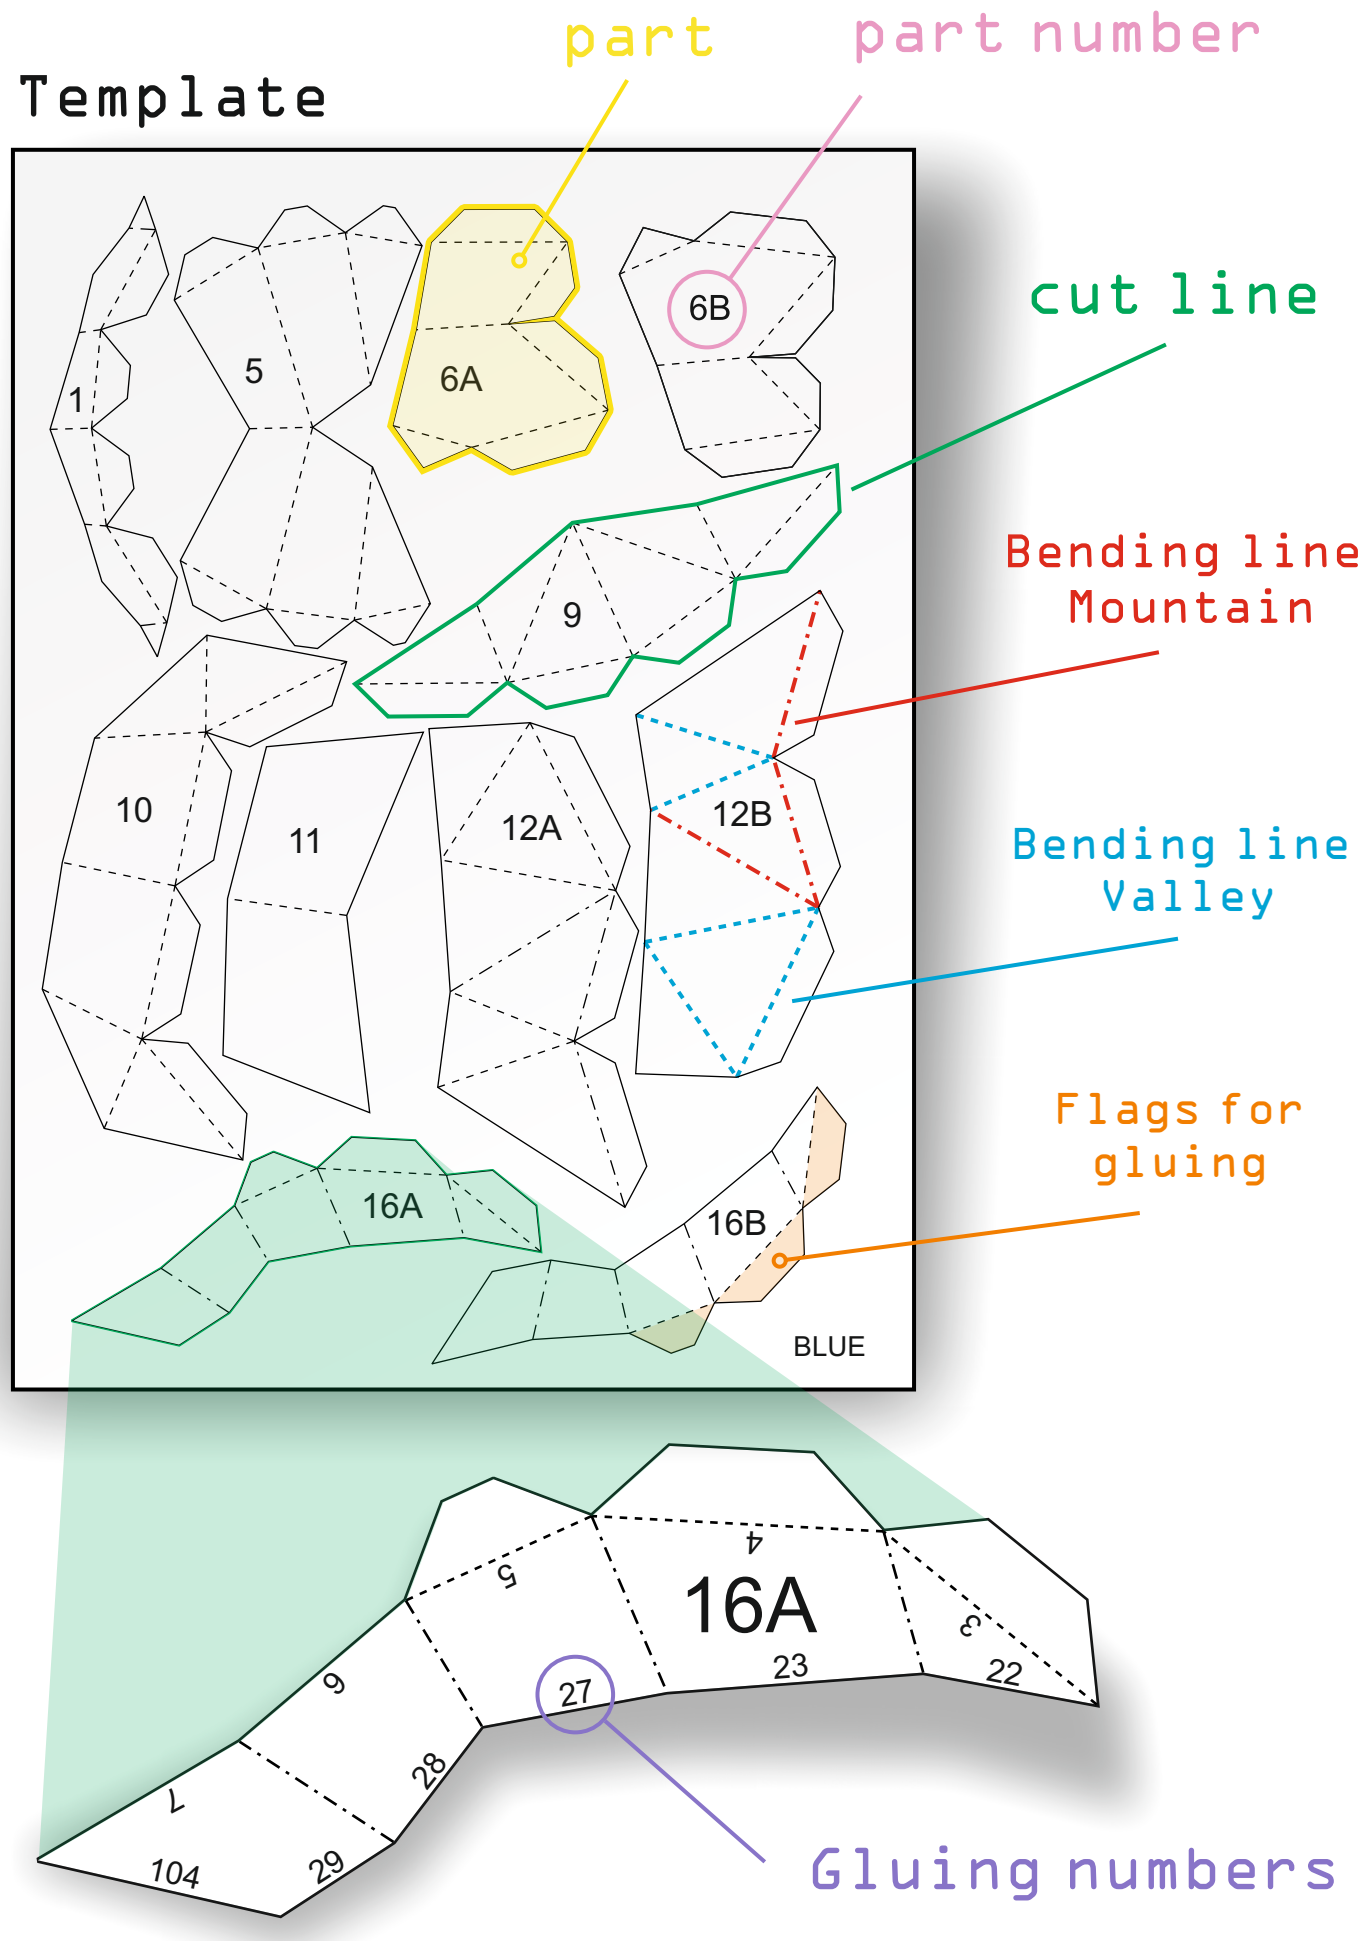
UNIVERSAL INSTRUCTIONS



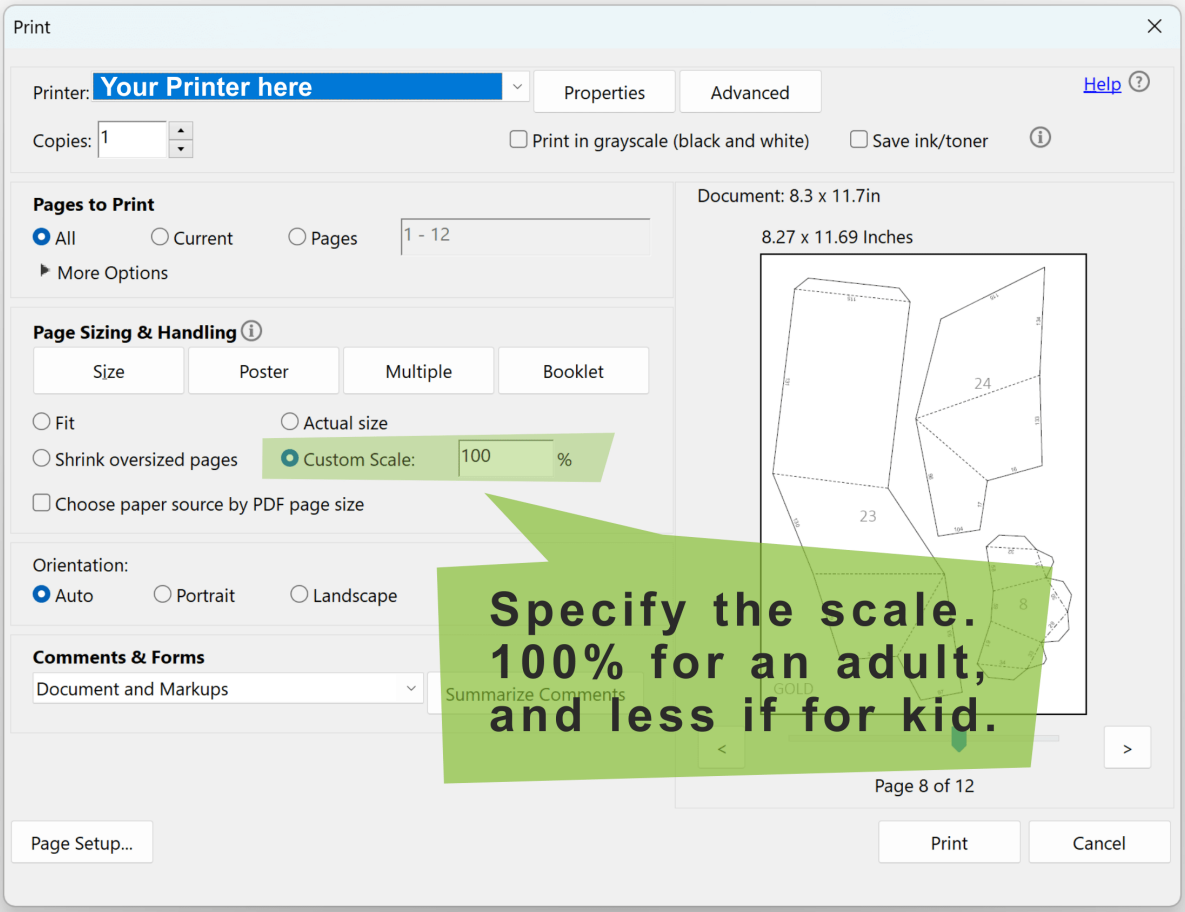
Masks for children

For an adult prints in 100% scale. For kids, select the 90% or 80% scale.
Select 80% or 90% scaling in the printer settings to print a smaller mask pattern.
Thus, the template will be printed on A4 format, but not with full page filling.

Age 14+ years

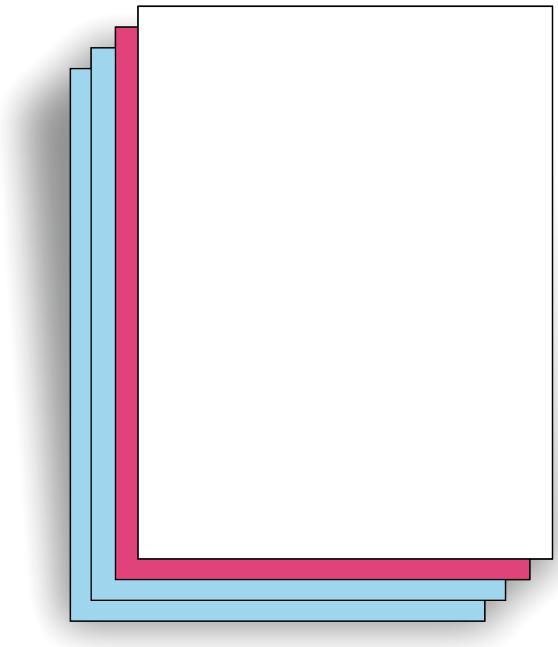
Age 8-14 years

Aage 3-8 years



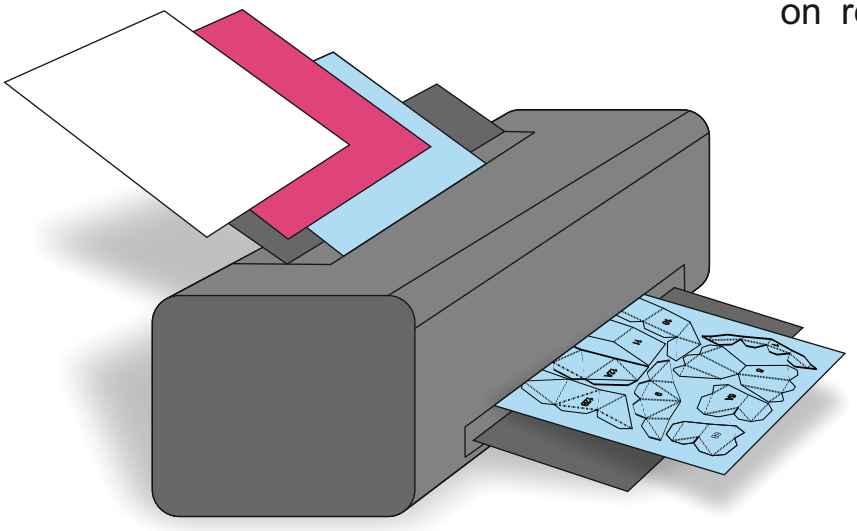
You will need: **cardboard, printer, dotting pen, ruler, scissors, glue**

Stage 1. Cardboard



Choose thick cardboard for crafts. We recommend using 200-300g/m2 cardboard for masks, small and medium figurines. For larger figurines, you can use thicker cardboard. Each project requires a certain number of sheets in the appropriate colors. As well as a certain sheet format. This information can be found in the project description.

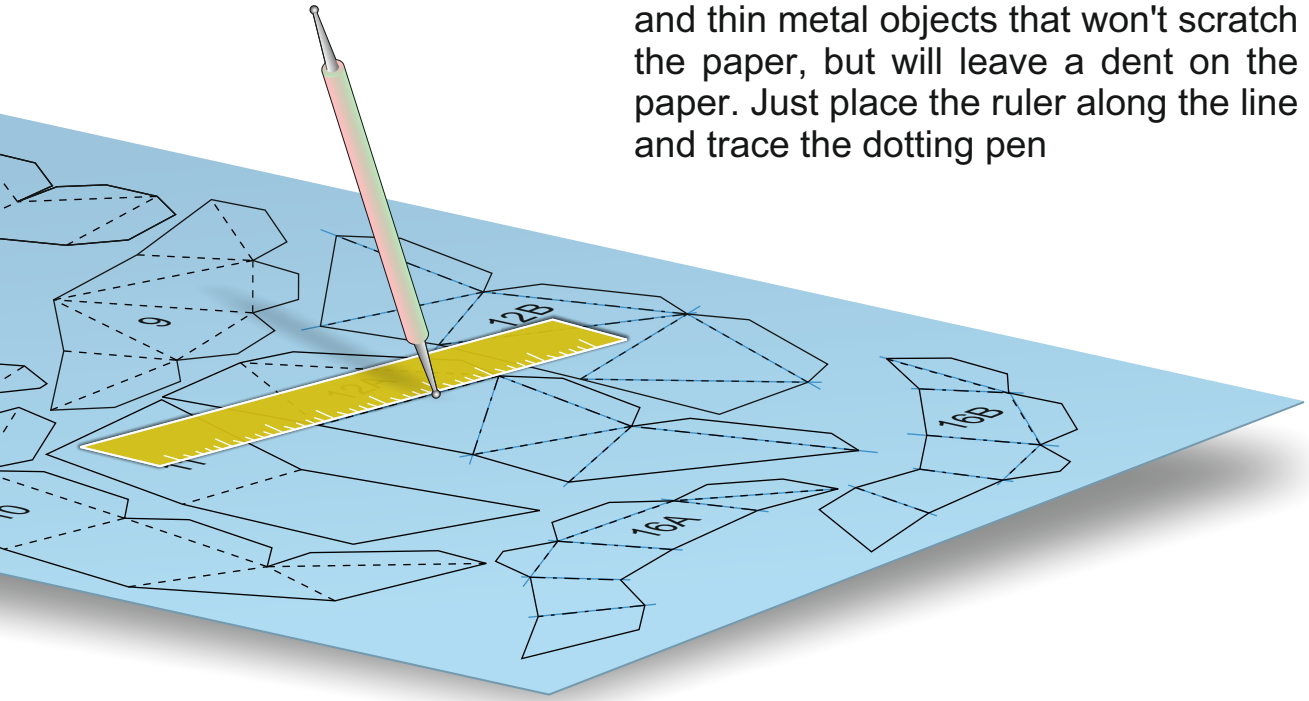
Stage 2. Printing

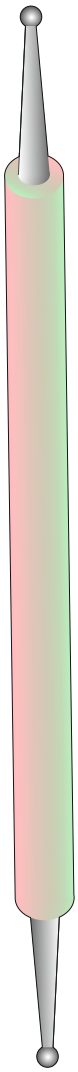


Print the template on the printer. You can print directly on designer paper if your printer supports thick paper. If your printer can only print on thin office paper, you can print on regular sheets and use them as a template. To do this, glue the template printed on thin sheets to the design cardboard on double-sided tape or PVA glue.

Stage 3. Preparing bend lines

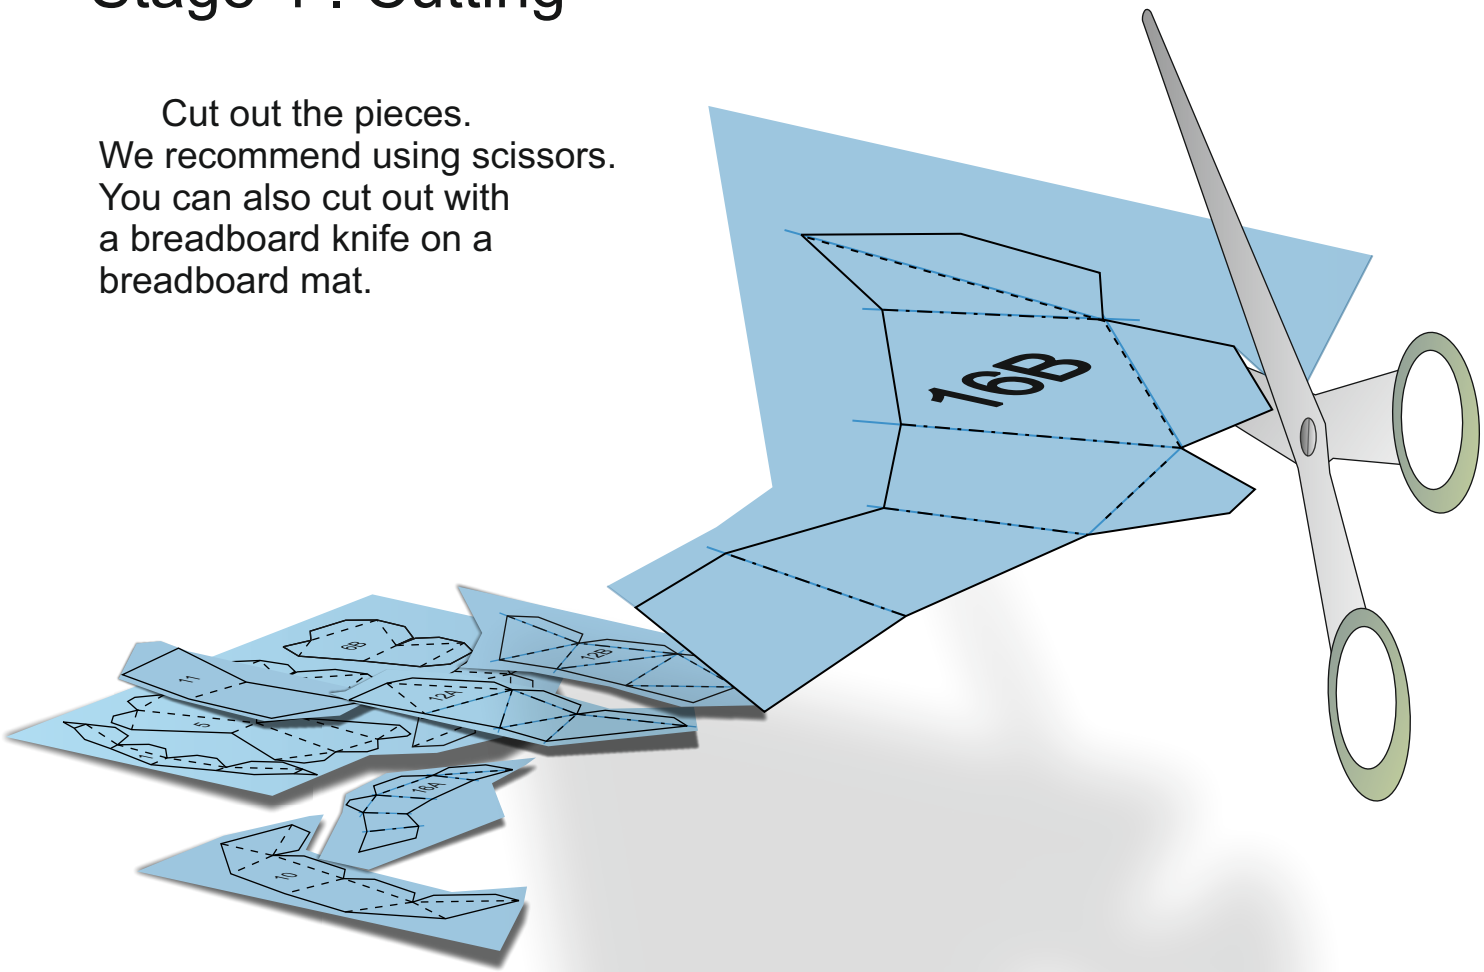
Push the line of future bends. These lines are designated as **dotted** and **dash-dotted** lines. Use a dotting pen for this. You can also use other hard and thin metal objects that won't scratch the paper, but will leave a dent on the paper. Just place the ruler along the line and trace the dotting pen



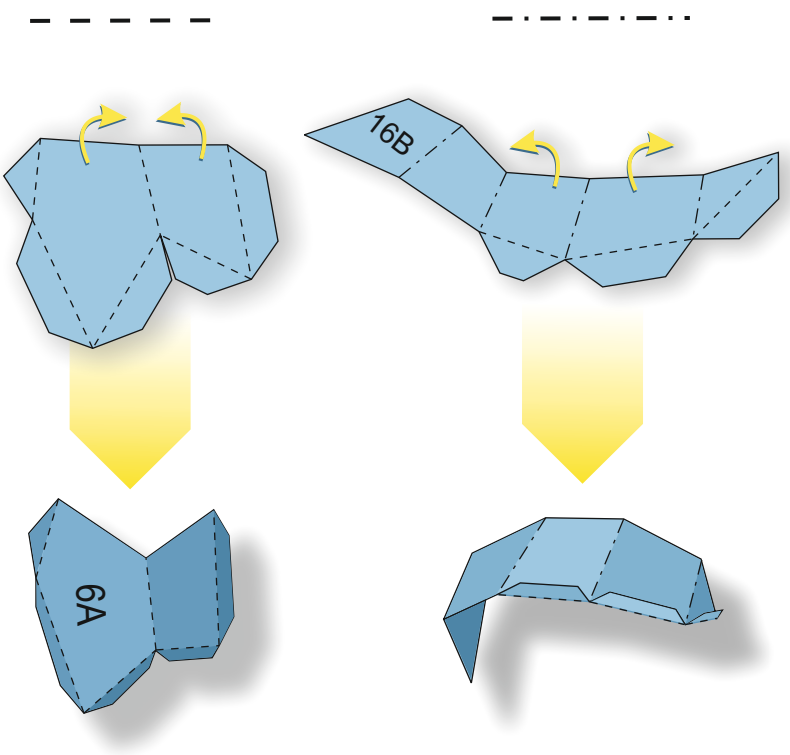


Stage 4 . Cutting

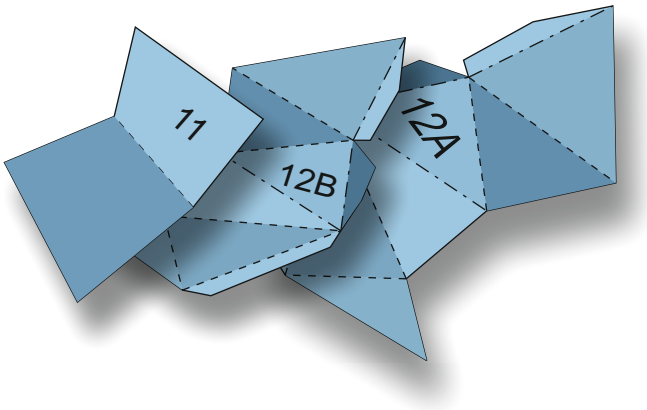
Cut out the pieces.
We recommend using scissors.
You can also cut out with
a breadboard knife on a
breadboard mat.



Stage 5. Bending

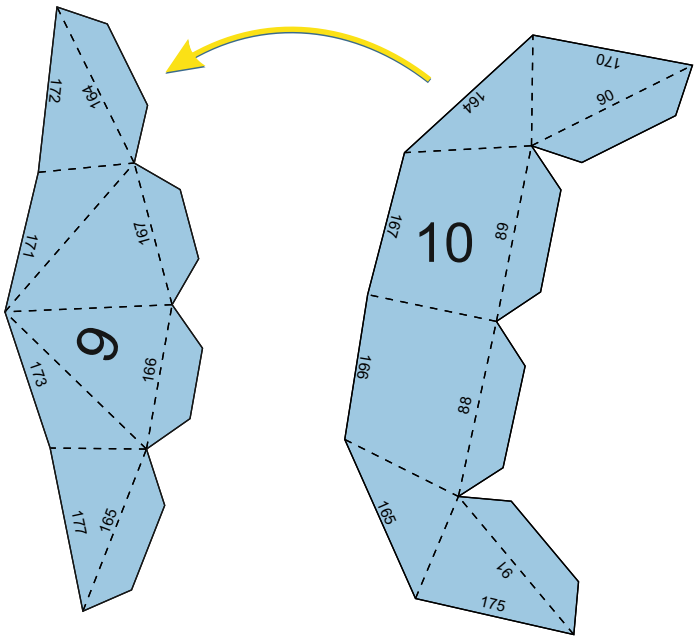


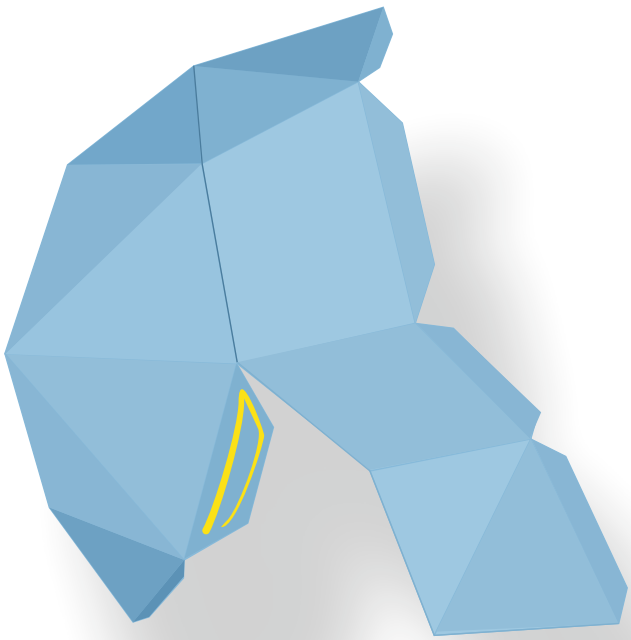
Bend all the cut pieces. The places of bending are indicated by **dotted** and **dash-dotted** lines. Follow the rule: dotted line is a valley, dash-dotted line is a mountain. Prepared bends greatly simplify further assembly.



Stage 5. Gluing

Arrange the pieces in descending order, the pieces numbered 1 will be on top. So, you will start with part 1, glue part 2 to it, then part 3, and so on in ascending order. Parts can also be called A and B, they indicate symmetrical parts, such as legs or ears of a figure. You need to glue the pieces together using **gluing numbers**. Glue by the same numbers in such a way that the **flags for gluing** is inside the figure. Use whatever glue you are comfortable with, we recommend using hot glue.

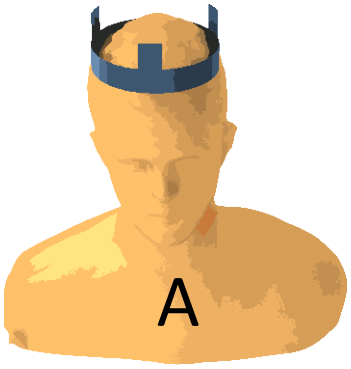


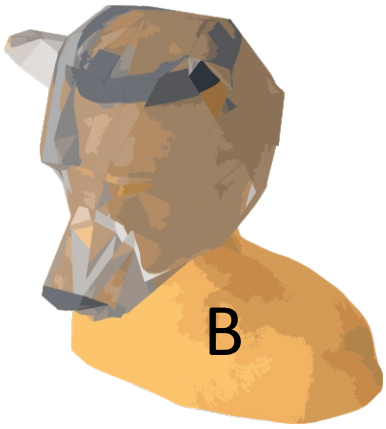


Head Ring

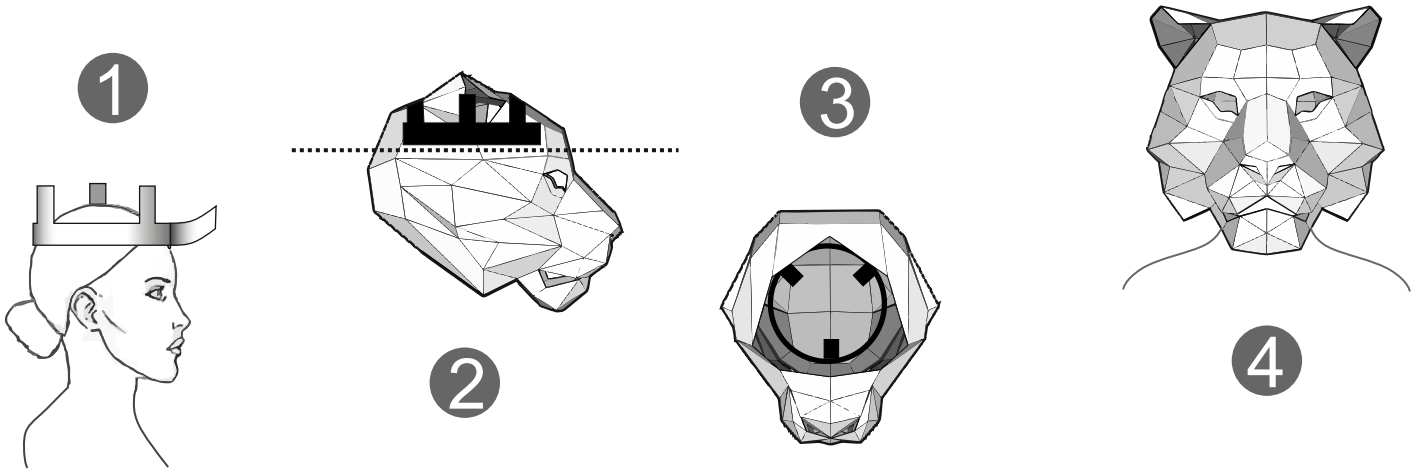
A. Cut out the details, glue them to the size of the head.

B. Glue the ring inside the mask





How to attach the headband ring to the mask



1. Fit the headband ring around your head to ensure a proper fit;
2. Align the ring on the mask, making sure to maintain a horizontal position;
3. Glue the ring onto the mask, securing it in place;
4. You're done! The headband ring is now attached to the mask.

- Measure the ring, it should fit like a cylindrical hat, not too tight to fall off and not too loose to slip through.
- Choose the appropriate level when gluing the ring to the mask, so that it is positioned about 3-4 fingers above the visibility holes. This way, the mask will fit comfortably and provide good visibility.
- The ring has tabs for gluing. Gradually glue hem starting with the first tab, then proceed to the others inside the mask, bending the tabs to apply the glue.

Glue

You will only need glue. As you may have noticed, we do not include glue in the kit as preferences for glue can vary. Additionally, the amount of glue required for each figure is minimal. You can use your favorite glue to assemble multiple models. Below is a table of glue characteristics to help you make a choice.

Choose glue based on its advantages:

glue	**bonding speed**	**reliability**	**ease of use**	**cleanliness**	**safety**	rating*
1. Hot glue	5/5	5/5	5/5	5/5	4/5	**24**
2. Liquid PVA	2/5 ***flaw***	4/5	3/5	3/5	5/5	**17**
3. Glue-Pencil PVA 	3/5	3/5	3/5	4/5	5/5	**18**
4. Super glue	5/5	5/5	4/5	4/5	1/5 ***flaw***	**19**
5. Polymer glue	2/5	4/5	3/5	3/5	3/5	**15**
6. Sticky tape	5/5	1/5 ***flaw***	4/5	5/5	5/5	**20**

If you are gluing for the first time, just be careful and follow our assembly tips. You will have a great time assembling and the result will bring you joy.

* The rating provided is a subjective assessment by the authors of this instruction. Your own evaluation may differ. The quality of glue can vary depending on the manufacturer, and the convenience can depend on your experience and preferences. Please consider this rating as a general recommendation.
